From the Forest to the Jobsite – We are with you every step of the way!

Adding Value to Guyana's finest tropical hardwoods

Greenheart Decking

The Untreated Alternative®

Greenheart decking is made from the finest greenheart timber harvested from responsibly managed forests, and is a 100% renewable resource. Greenheart decking is kiln dried at our facility in Guyana, which ensures a superior product -- free from checking, splitting or warping.

The superior mechanical properties of Greenheart Decking make it highly desirable for structural as well as decorative uses.

Characteristics & Benefits:

- Life expectancy of 30+ years
- Naturally resistant to rot, termites and decay
- Kiln-dried for optimum performance
- Highly resistant to fire
- No chemical preservatives required
- Abundantly available with consistent supplies
- Do not require any coating for protection against wind, sun, rain, ice or snow
- Among the strongest and most durable tropical hardwoods

Turada[®] Wallaba Shingles

The Untreated Alternative[®]

Wallaba shingles and shakes have been in use for almost a century throughout the Caribbean. Wallaba is a dense tropical hardwood species

from Guyana, South America, and is known throughout the world for its natural resistance to insects and decay. This resistance means Turada[®] Hardwood Shingles (made from Wallaba) do not require chemical treatment -- making them an environmentally friendly product.

Turada[®] *Wallaba Shingles*

The Untreated Alternative[®]

Characteristics & Benefits

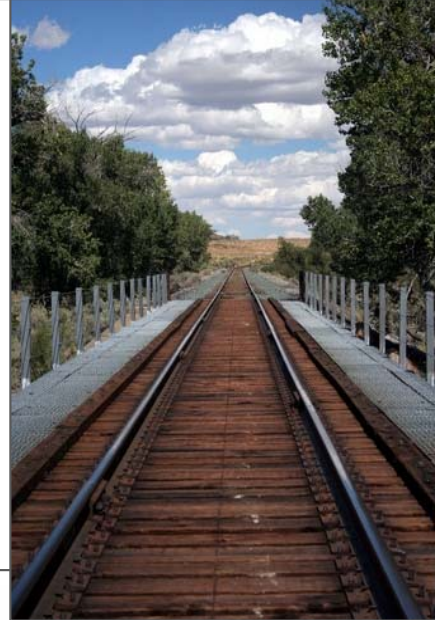

- Highly resistant to insects and decay
- No preservative treatment required
- Life span of over 50 years
- Easy to handle and install
- Hurricane resistant
- Highest Fire-Resistant Wood Shingle

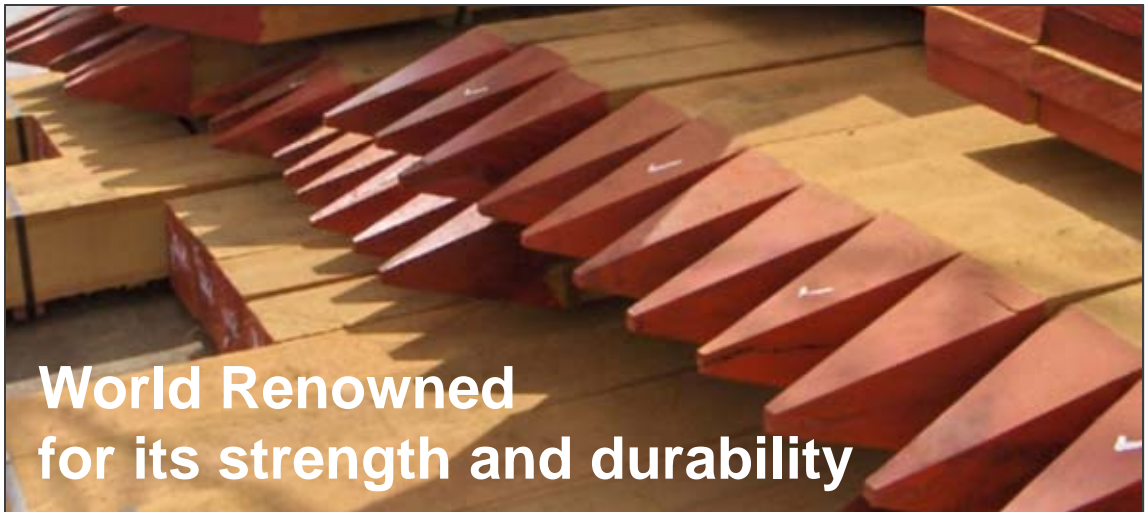

Mora Railroad Ties

The Untreated Alternative[®]

- Naturally Resistant to Insects and Decay
- No treatment required
- Pre-Plating Available
- Crossties & Switch Ties
- Bridge Ties & Timbers
- Environmentally Friendly
- Sustainably Harvested
- Test Report Available

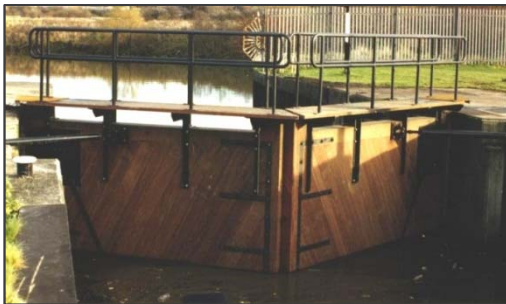

Greenheart Piling & Timbers

**World Renowned
for its strength and durability**

With its excellent resistance to attack from marine borers, very high durability, and superior strength properties, greenheart is ideally suited for use under the most demanding conditions. This makes greenheart the number one timber choice for either salt water or fresh water applications.

Greenheart has been used for over 150 years and is undoubtedly the most suitable timber species for marine construction.

Greenheart Piling & Timbers (cont'd)

Greenheart is three to four times stronger than treated pine or fir, and is biologically resistant to marine boring pests and decay. Greenheart's natural preservatives will not dissipate. However, the poisonous chemicals in some treated woods may leach out, damaging the environment and leaving the wood vulnerable to marine organisms.

Extraordinary density along with high bending strength and high crushing strength makes greenheart ideal for heavy structural work. It is commonly used in docks, piers, jetties, pilings, lock gates, wharves, and marinas. Greenheart has been known to last over 50 years without developing any defects.

Purpleheart

Characteristics & Benefits

- Very hard, strong, durable
- Termite- and rot-resistant
- Long-lasting natural product
- Rich, exotic color
- Fine-textured, straight, tight-grained

Tropical Hardwood Species

Greenheart

Andiroba - Guyana Mahogany

Determa

Turu Palm

Basralocus - Angelique

Darina - Angelim Pedra

Wamara

Simarupa - Marupa

Purpleheart

Wallaba

Kabukalli

Koraro - Batseed

Mora - Pracuuba

Bulletwood - Macaranduba

Shibadan

Jatoba - Locust
